

“From the Paper to the Scientist” meeting provide opportunities for trainees to interact personally with distinguished epigenetic leaders world-wide. The Fox Chase Cancer Center Epigenetic Institute has developed this meeting so that each month a world-leading expert in epigenetics is featured to discuss a paper or two from their own group with CEI-FCCC/Temple trainees. The goal of this interaction is to bring scientists who are at the pinnacle of their field to discuss their science, papers and discoveries with trainees to encourage learning, inspiration and discussion.

As a reminder, trainees across all scientific disciplines are invited to learn and interact with leading scientists world-wide.
